

Produced water substances to the seabed

- No sedimentation of hydrocarbons and production chemicals from PW documented offshore
- A transport of radioactive isotopes is described for the Tampen area (Northern North Sea) (salt formation & precipitation)
 - ^{226}Ra & ^{228}Ra dominates
Background levels in the sea 1-5 mBq/L
 - PW with means: 3.3 & 2.8 mBq/liter for ^{226}Ra & ^{228}Ra
- Ca 2x background level in Tampen area waters
